EDUCATION

Technical University of Cluj-Napoca (UTCN) Oct 2024 - Jul 2028 (expected)

B.Sc. in Computer Science | Taught in English

Relevant coursework: Data Structures and Algorithms, Object-Oriented Programming, Databases, Operating Systems. **In progress:** Software Engineering, Artificial Intelligence.

TECHNICAL SKILLS

Languages: Java, Dart, C, C++, SQL, VHDL, HTML/CSS
Frameworks and data: Flutter, Javalin, JDA, JDBC, PostgreSQL, SQLite
Engineering: REST APIs, concurrency, caching, rate limiting, object-oriented design
Testing and tools: JUnit 5, unit/widget/golden tests, Git, GitHub Actions CI, Claude Code

SELECTED PROJECTS

Vitaly: CS2 Player Analytics | Java, Javalin, SQLite, JUnit GitHub

- Built a Discord bot and web dashboard that transform FACEIT API data into player reports, playstyle classifications, map comparisons and an ELO leaderboard.
- Implemented TTL caching, retries with backoff and per-client rate limiting; moved slow commands to a worker pool to keep Discord interactions responsive.
- Wrote 29 JUnit tests using a fake upstream API and a random-port web server; automated execution with GitHub Actions CI.

Direction | Flutter, Dart Demo / GitHub

- Developed a mobile and web app with a strengths quiz, daily plans, evening check-ins and progress tracking; available as a public web demo and in Google Play closed testing.
- Designed offline-first local storage, deriving streaks, milestones and insights from raw activity history.
- Wrote 384 automated tests, including screen-level golden tests and fake-clock tests for day/month transitions and missed days.

Solo Ship Kit | Dart, Flutter | Independent project

Oct 2026 - Present

- Built a Dart pipeline that generates PDF documentation, image assets and tiered release archives from a single configuration file.
- Added release checks for secrets, signing keys and private files, plus a Claude Code guard hook to block commands that access secrets.
- Created a Flutter starter app, reusable development templates and a prompt library with supporting documentation.

Queue Management Simulator | Java, multithreading, Swing GitHub

- Simulated clients across service queues using one thread per queue; reported average waiting time, service time and peak hour.
- Used blocking queues, atomic counters and a volatile stop flag for shared state; applied Strategy for dispatch policies and Observer to decouple the UI.

LANGUAGES

Romanian: native | English: fluent; degree taught in English
